

REPORT UPDATE MOLECULAR ONCOLOGY

Pranil K. Chandra, DO, Medical Director

This change will take effect **August 31, 2015**.

Effective August 31, 2015, PathGroup will introduce updated molecular oncology reports with key enhancements to formatting, color blocking and report layout. This release is the combined effort of the Molecular Operations and IT Development teams to bring clients clear concise reports optimized for ease of use and interpretation.

Pertinent reporting updates include a revitalized PathGroup SmartGenomics™ color scheme making ordering and reporting visually cohesive, prominently placed results section, single accession reporting with stacked results, and enhanced test methodology sections with references and interpretation data. All explanatory information from existing molecular oncology reports will remain unchanged. Testing for HL7 messaging is complete and prepared to accept new report formatting with EMR clients.

For further questions, please contact Oncology Customer Support at 1-855-854-6473.
